Table S1. Photovoltaic parameters of bulk heterojunction solar cells from references [25-27]. V_{oc} – open circuit voltage, FF – fill factor, J_{sc} – short circuit current, PCE – power conversation efficiency.

Correlation coefficient was calculated by the formula:

$$R = \frac{\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2}},$$

where x – ionisation energy value or work function- value, y – solar cells parameter, \bar{x} and \bar{y} – mean values of the parameters.
