

Table S3A. Percentages are done on the total drug discontinuations.

Table S3B. Statistical analysis of the correlation between the group of drugs studied and the reason for discontinuation using the χ^2 or Fisher test.

	Anti-TNF (yes/no)			Anti-IL12/23 (yes/no)		
	CI _{95%}	OR	p-value	CI _{95%}	OR	p-value
Lack of efficacy (yes/no)	0.36-0.99	0.604	0.036	1.05-3.52	1.895	0.024
Adverse event (yes/no)	0.94-3.39	1.768	0.056	-	-	0.343
Remission (yes/no)	1.05-21.07	3.835	0.027	-	-	0.173*
Other reasons (yes/no)	-	-	0.354	-	-	0.216

*Fisher-test.

The results that are statistically significant (p<0.05) are coloured in grey, a tendency to significance in bold, and CI_{95%} and OR are also indicated.
