The end of the experiment after 96 h

Bezafibrate
Tocotrienols

31.25µg/mL

62.5µg/mL

125µg/mL

250µg/mL

500µg/mL

1000µg/mL

Figure S1. Mortality rates and morphological abnormalities were monitored at 24, 48, 72, and 96 h. No instances of death or deformity were observed in zebrafish subjected to tocotrienol or in the control group.
