Continuous data presented as median (IQR). Categorical data are presented as number (percentage). The comparisons were performed using Person chi-square for categorical variables, and Kruskal-Wallis for quantitative variables). AT=atherothrombotic; CE=Cardioembolic; ESUS=Embolic Stroke from Undetermined source; IS=Ischemic stroke.

**Table S2:** Differentially expressed genes (DEG) after the transcriptomic analysis of circulating EVs of IS patients (AT n=4-6, CE n=6-10, ESUS n=4-5).

ENSEMBL ID	NAME	FOLD CHANGE	AVEEXPR (LOG2CPM)	p (LIMMA VOOM)

## Supplementary Figures

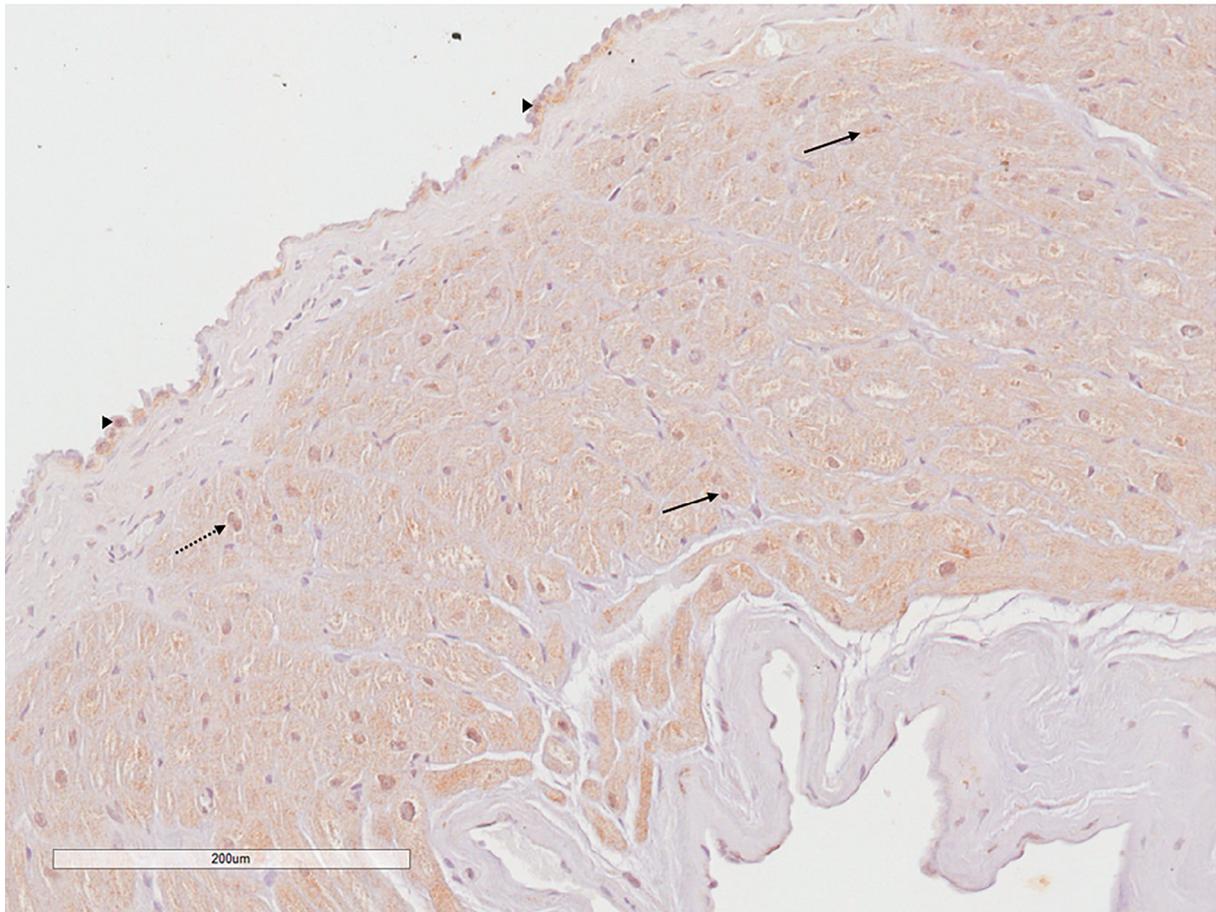

**Figure S1:** Western blot for the EVs markers EMMPRIN and ALIX, and plasma contaminant (APOB100) in EVs from plasma.

**Figure S2:** Western blot of plasma EVs from IS patients (n=3 AT and 3 CE) showing selected candidates and their expected molecular weights (MW). EVs 1 to 3 are from AT patients and 4 to 6 are from CE patients.

**Figure S3:** Representative serial images of CE thrombus immunostained for IGFBP-2 (A), CD68 - labelling macrophages (B), Neutrophil Elastase - labelling neutrophils (C), and CD45 - labelling leukocytes (D). Scale bars represent 100  $\mu$ m.

**Figure S4:** Immunostaining of IGFBP-2, in the left atrium of patient with AF. IGFBP-2 was found mostly in cardiomyocytes (arrow), in endothelial (dotted arrow), and mesothelial (arrowhead) cells. Scale bar represent 200  $\mu$ m.
