## **Supplementary Figures and Tables**

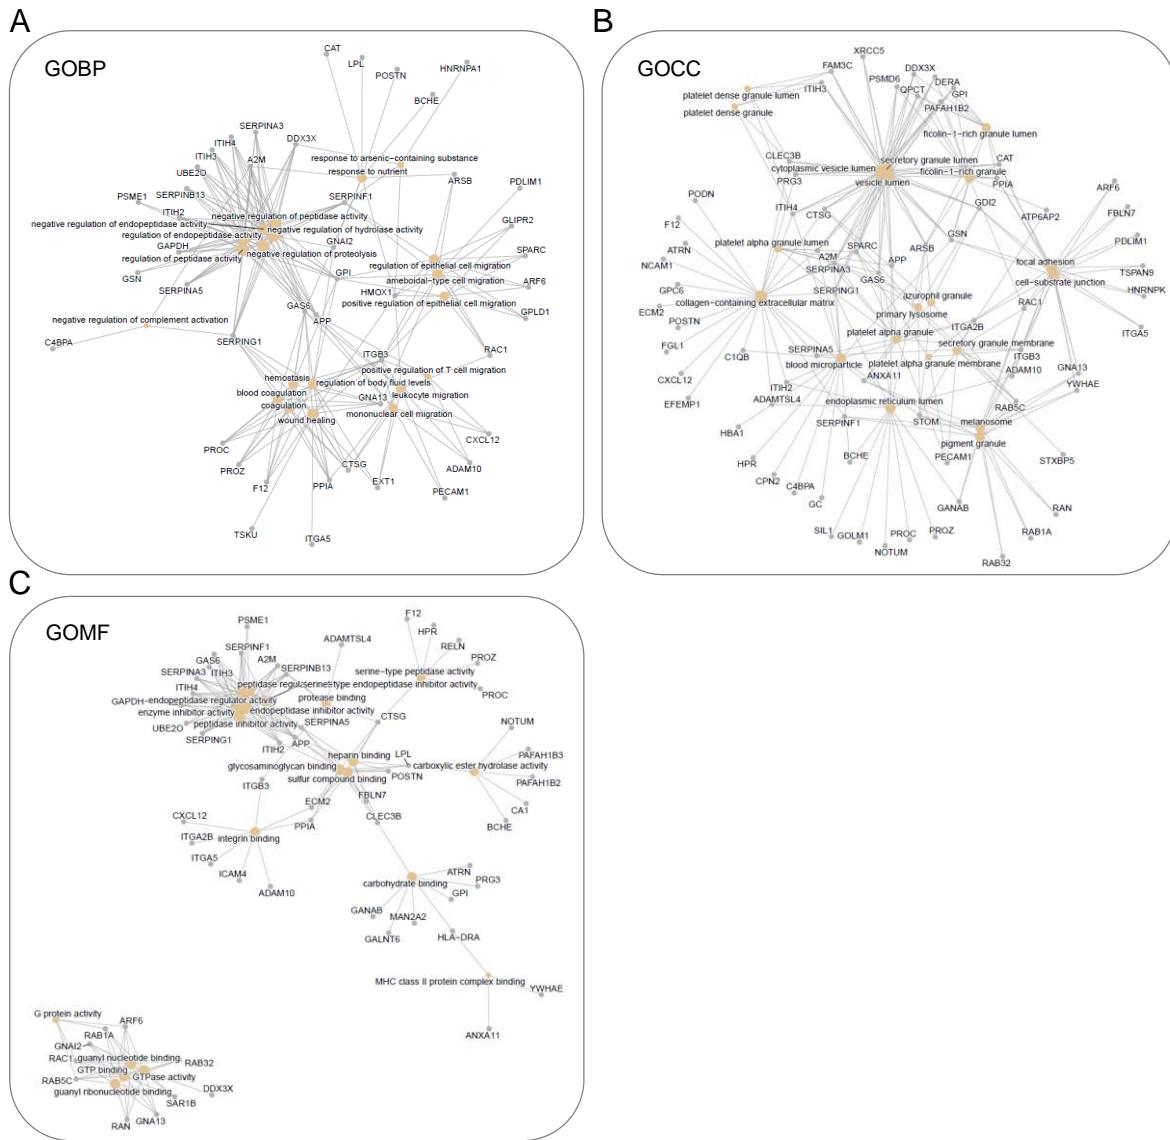

**Supplemental Figure S1. Cholesterol and blood pressure before and after therapy in PVS and PCS patients.** (A) total cholesterol, (B) LDL and (C) MAP. PVS = post-vaccination syndrome, PCS = post-COVID syndrome, S = spike protein, N = nucleocapsid protein, LDL = low-density lipoprotein, HDL = high-density lipoprotein, MAP = mean arterial pressure.

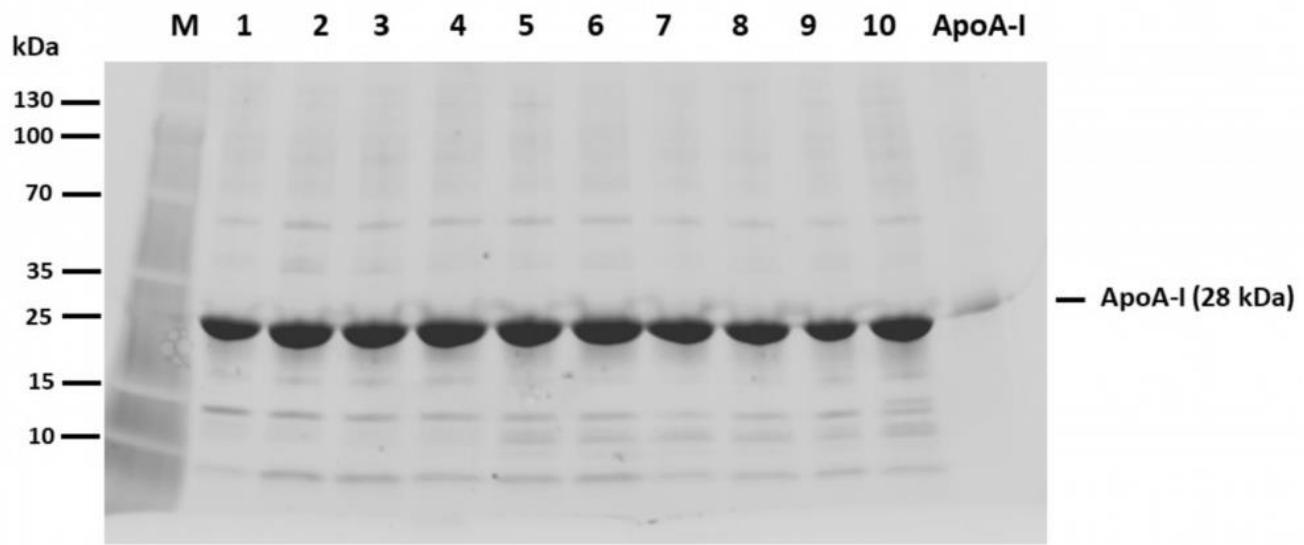

**Supplemental Figure S2.** No differences in protein abundance in the HDL proteome of controls and patients in relation to vaccinated vs. vaccinated with past infection. Protein abundance in the HDL of control and patients (PVS/PCS) were compared in regard to their antibody status ( $S^+ N^-$  vs.  $S^+ N^+$ ) and are presented as volcano plot. More abundant proteins are shown in green and less abundant proteins are shown in red. PVS = post-vaccination syndrome, PCS = post-COVID syndrome, S = spike protein, N = nucleocapsid protein, HDL = high-density lipoprotein.

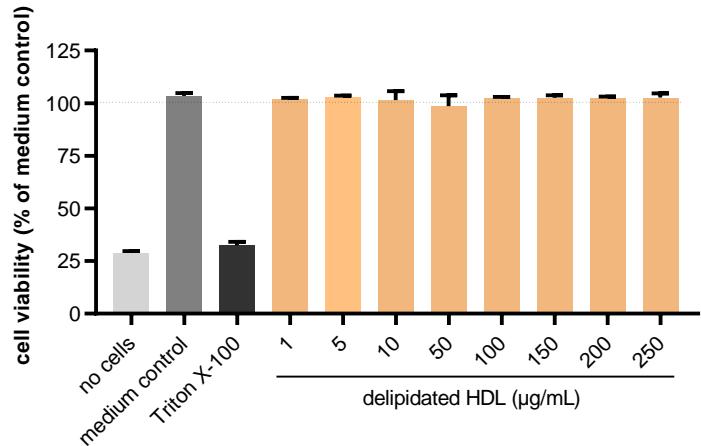

**Supplemental Figure S3.** Differentially abundant proteins ( $p < 0.05$ ) in the HDL proteome of PVS/PCS patients compared to controls are shown in a pathway enrichment analysis using (A) gene ontology biological process (GOBP), (B) gene ontology cellular component (GOCC) and (C) gene ontology molecular function (GOMF) annotations. PVS = post-vaccination syndrome, PCS = post-COVID syndrome, HDL = high-density lipoprotein.

**Supplemental Figure S4.** Differentially abundant proteins ( $p < 0.05$ ) in the HDL proteome of PVS/PCS patients after therapy compared to before are shown in a pathway enrichment analysis using (A) gene ontology biological process (GOBP), (B) gene ontology cellular component (GOCC) and (C) gene ontology molecular function (GOMF) annotations. PVS = post-vaccination syndrome, PCS = post-COVID syndrome, HDL = high-density lipoprotein.

**Supplemental Figure S5.** SDS-PAGE of HDL samples. Inverse image of representative HDL isolates from serum samples subjected to 4-20% SDS-PAGE. 20 µg total protein was applied. The major band on the gels represents ApoA-I. Purified human ApoA-I was used as control and a protein ladder as a molecular weight standard (M). kDa = kilodalton. HDL = high-density lipoprotein.

**Supplemental Figure S6.** Cell viability (%) of EAh.926 cells after 6 hrs of stimulation with delipidated HDL (1-250  $\mu\text{g/mL}$ ) was determined using alamarBlue cell viability assay. Conditions without cells and Triton X-100 were used as positive controls and cell culture medium as negative control.  $n = 2$ . HDL = high-density lipoprotein.

**Supplemental Table S1. Symptoms of PVS and PCS patients.**

	patients	
	PVS (S <sup>+</sup> /N <sup>-</sup> ) n=8	PCS (S <sup>+</sup> /N <sup>+</sup> ) n=7
antigen-status		
duration of symptoms (days)	319.5(107-376)	329.5(150-400)
muscle pain	5	4
headache	4	6
impairment of the ability to concentrate and remember	6	6
perceptual and sensory disorders	6	4
movement coordination disorder, muscle weakness, -twitching	6	4
reading disorders, word-finding disorders, information processing disorder	4	4
dizziness when standing up too quickly	1	4
dizziness and lightheadedness	3	7
impaired intestinal motility	6	4
shortness of breath at rest/light physical exertion	6	3
increase or loss of appetite, weight gain or weight loss	6	3
painful lymph nodes	4	1
palpitations, rapid pulse, heart stuttering	7	5
chest pain, chest tightness	5	4
brain fog	4	5
fatigue	5	6
restrictions in the social environment	8	5

Median and range are shown for duration of symptoms. Main symptoms reported (prevalence >50%). PVS = post-vaccination syndrome, PCS = post-COVID syndrome, S = spike protein, N = nucleocapsid protein.

**Supplemental Table S2. Comorbidities in controls and PVS/PCS patients.**

antigen-status	control		patients	
	S <sup>+</sup> /N <sup>-</sup> n=8	S <sup>+</sup> /N <sup>+</sup> n=8	PVS (S <sup>+</sup> /N <sup>-</sup> ) n=8	PVS (S <sup>+</sup> /N <sup>+</sup> ) n=7
allergies present	3	2	6	3
Hashimoto Thyreoiditis	1	1	2	1
Migraine	-	1	2	1
Scoliosis	1	1	1	1
state after viral infection (EBV/CMV/Meningitis)	-	-	3	-
bronchial asthma	2	-	1	-
endometriosis	-	1	1	-
neurodermatitis	-	-	1	1
spinal stenosis	-	-	-	1
cranio mandibular dysfunction	-	-	1	-
herniated disc	-	-	1	-
condition after type b gastritis	-	-	-	-
diabetes mellitus I	-	-	1	-
hypothyreosis	-	-	1	-
chronic back pain	-	-	-	1
primary M. Raynaud	-	-	1	-
state after M. Hodgkin	-	-	1	-
condition after hemorrhagic shock with mass transfusion	-	-	-	1
state after cervical cancer	1	-	-	-
Morbus Meulengracht	1	-	-	-
benign paroxysmal positional vertigo	-	1	-	-
polyneuropathy	1	-	-	-
M. Basedow	1	-	-	-
arterial hypertension	1	-	-	-

PVS = post-vaccination syndrome, PCS = post-COVID syndrome, S = spike protein, N = nucleocapsid protein.

**Supplemental Table S3. Medication of PVS and PCS patients.**

	PVS patients S <sup>+</sup> /N <sup>-</sup> (n=8)	PCS patients S <sup>+</sup> /N <sup>+</sup> (n=7)
antigen-status		
<i>statin</i>		
Rosuvastatin (10 mg/day)	6	5
Simvastatin (20 mg/day)	2	1
Atorvastatin (10 mg/day)	-	1
<i>ARB</i>		
Candesartan (4 mg/day)	1	1
Candesartan (8 mg/day)	6	3
Candesartan (16 mg/day)	-	2
Telmisartan (20 mg/day)	-	1
Telmisartan (80 mg/day)	1	-

PVS = post-vaccination syndrome, PCS = post-COVID syndrome, S = spike protein, N = nucleocapsid protein. ARB = angiotensin II receptor blocker.

**Supplemental Table S4. Blood pressure and cholesterol and its fractions inflammatory markers in healthy controls and PVS/PCS patients before and after therapy.**
