Figure S1 Exploratory analysis of saliva samples on a swab following PCA. Following pairwise comparisons of benign *versus* cancer, four independent multivariate analysis of variance (MANOVA) tests were undertaken to test for significance of segregation. Separation between the categories is also examined employing PCA-LDA (using the first 10 PCs) in a 1-D scores plot.

PC LDA of benign vs lung cancer (dry swab subtracted)

Figure S2 Exploratory analysis of saliva samples minus a dry swab spectral signature following PCA. Following pairwise comparisons of benign *versus* cancer, four independent multivariate analysis of variance (MANOVA) tests were undertaken to test for significance of segregation. Separation between the categories is also examined employing PCA-LDA (using the first 10 PCs) in a 1-D scores plot.

PC LDA of benign vs lung cancer (wet swab subtracted)

Figure S3 Exploratory analysis of saliva samples minus a wet swab spectral signature following PCA. Following pairwise comparisons of benign *versus* cancer, four independent multivariate analysis of variance (MANOVA) tests were undertaken to test for significance of segregation. Separation between the categories is also examined employing PCA-LDA (using the first 10 PCs) in a 1-D scores plot.

A**B****C**

Figure S4 The wavenumbers contributing the most to variance along each of the first 10 PCs (87.2% total variance). Obtained following pairwise comparisons: A) benign *versus* cancer following swab analysis; B) benign *versus* cancer following swab analysis with subtraction of dry swab spectra; and, C) benign *versus* cancer following swab analysis with subtraction of wet swab spectra.

A**B****C**

Figure S5 Application of k-nearest neighbours (k-NN). A three nearest neighbours construction was undertaken for each of the three pairwise comparisons undertaken: A) benign *versus* cancer following swab analysis; B) benign *versus* cancer following swab analysis with subtraction of dry swab spectra; and, C) benign *versus* cancer following swab analysis with subtraction of wet swab spectra.
