

Supplementary Materials:

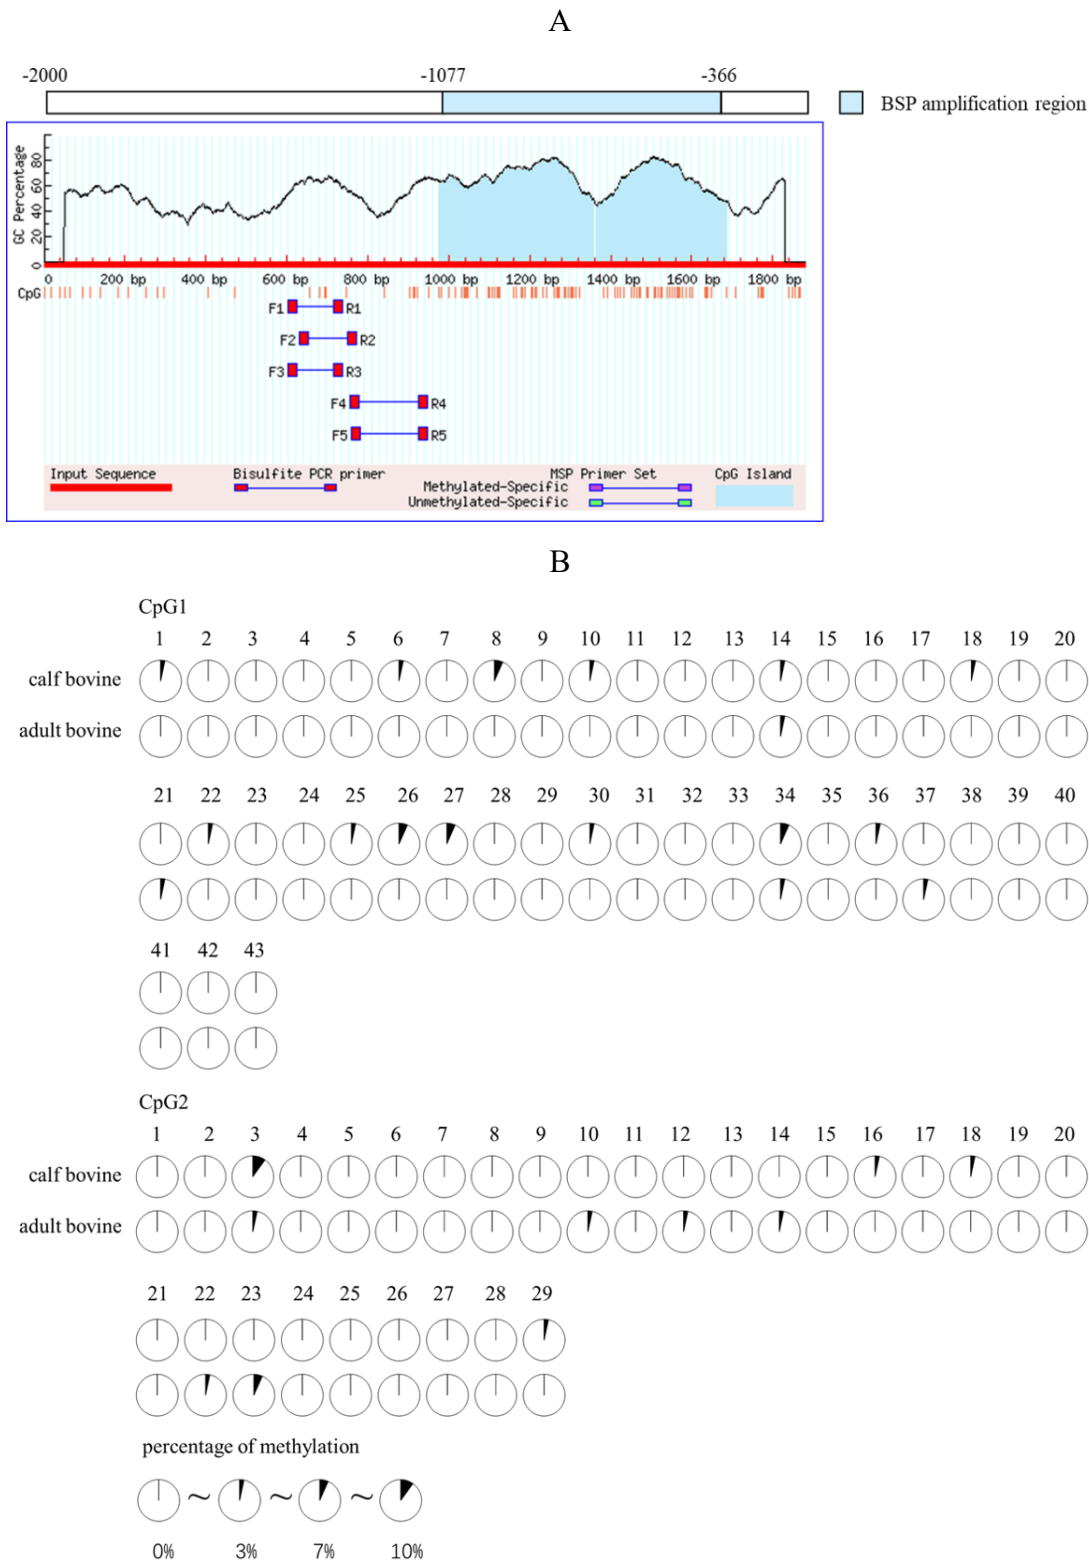

Figure S1. Study on DNA methylation level of *FOXO1* gene promoter. A: The *FOXO1* promoter region was analyzed by online software for the presence of two CpG islands at -366bp to -1077bp. B: The average methylation level of each site in the longissimus dorsi muscle CpG island. Rows indicate different age groups; columns indicate each CpG site with lower overall methylation levels.
