Supplementary figures.....	1
Figure S1. Effects of cluster thinning treatments on berry weight, total soluble solids (TSS) content and titratable acidity (TA) in berries of Cabernet Sauvignon during grape development in two seasons (2011-2012). CT-1, one cluster per shoot thinned, 1 cluster/shoot reserved; (B) CT-2, one cluster every other shoot thinned, average 1.5 clusters/shoot reserved; (C) CT-3, not thinned, 2 clusters/shoot reserved.	1
Figure S2. Schematic diagram of three cluster thinning treatments. (A) CT-1, one cluster per shoot thinned, 1 cluster/shoot reserved; (B) CT-2, one cluster every other shoot thinned, average 1.5 clusters/shoot reserved; (C) CT-3, not thinned, 2 clusters/shoot reserved.	2
Supplementary tables	3
Table S1. Meteorological data of the experimental field during the growing season (April-October) and ripening period (August-September) in 2011-2012.	3
Table S2. The concentrations of C ₆ and C ₉ volatiles in wines made from berries with different treatments from two farms in two vintages.	4
Table S3. The average values of the selected soils parameters in two vineyards.	5
Table S4. Wine parameters made from berries with different treatments from two farms in two vintages.	6
