

The average results of the different experiments performed. The numbers in the experiment name represent the subsets and the threshold used. For example, k2\_t1 indicates that the dataset is divided into two subsets, and the threshold is set to 1.

Experiment	recall	precision	F1	F2
k2_t1	0.80	0.045	0.084	0.182
k2_t2	0.54	0.093	0.160	0.277
k3_t1	0.86	0.031	0.059	0.134
k3_t2	0.65	0.062	0.113	0.224
k3_t3	0.46	0.123	0.193	0.298
