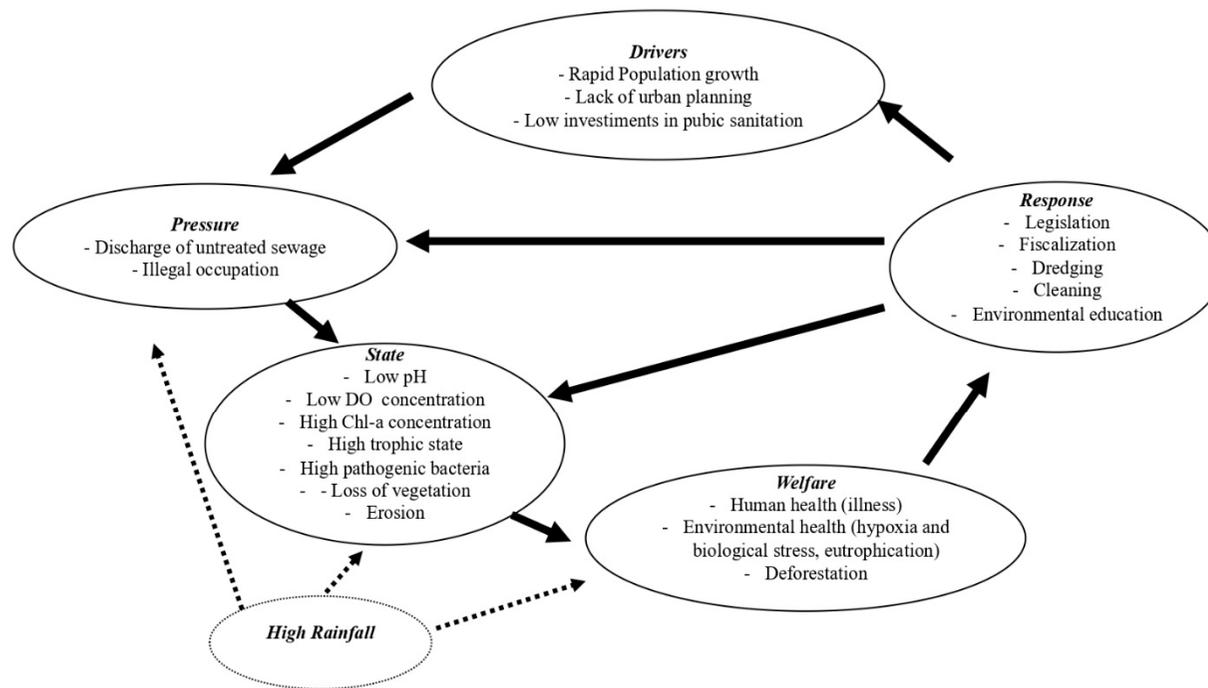

Figure S2. Summary of the DPSWR management model for the Cereja River.

Table S1. Localization of the sample stations.

Sample Station	Location	Coordinates (S)	Coordinates (W)
P1	Vila Nova	01°03'521"S	46°47'227"W
P2	Vila Sinhá	01°03'327"S	46°46'581"W
P3	Taira	01°03'148"S	46°46'185"W
P4	Padre Luiz	01°03'560"S	46°45'586"W
P5	Aldeia	01° 03'23"S	46° 45'480"W
P6	Aldeia	01° 03'551"S	46° 45'423"W

Table S2. Types of freshwater use, according to Brazilian National Environment Council (CONAMA).

CLASSES	TYPES OF USE
Special class	Water that can be used for (a) human consumption following disinfection; b) the preservation of the natural balance of aquatic communities; and (c) the preservation of aquatic environments in strictly-protected conservation units.
Class 1	Water that can be used for (a) human consumption, after simple treatment; (b) the protection of aquatic communities; (c) recreational activities involving primary contact, such as swimming, water skiing, and diving (CONAMA resolution 274/2000); (d) irrigation of fruit and vegetables that are consumed raw without removing the skin or harvested close to the soil, and (e) the protection of aquatic communities on indigenous lands.
Class 2	Water that can be used for (a) human consumption, after conventional treatment; (b) the protection of aquatic communities; (c) recreational activities involving primary contact, such as swimming, water skiing, and diving (CONAMA resolution 274/2000); (d) the irrigation of vegetables, fruit, and parks, gardens, and sports fields, with which the public may come into direct contact, and (e) aquaculture and fisheries.
Class 3	Water that can be used for (a) human consumption, after conventional or advanced treatment; (b) the irrigation of tree, cereal, and forage crops; (c) amateur angling; (d) recreational activities with secondary contact, and (e) the watering of animals.
Class 4	Water that can be used for (a) navigation, and b) landscaping.

Table S3. Percentage of limits of hydrological variables, considering national resolution and international classification.

VARIABLES	LIMITS	SAMPLES (%)
pH	<sup>a</sup> 60-90 (ideal Class 1, 2, 3, 4)	88%
Turbidity	<sup>a</sup> Up to 40 NTU observed (ideal, Class 1)	98%
	<sup>a</sup> Up to 100 NTU observed (ideal, Class 2, 3)	98%
Dissolved Oxygen	<sup>a</sup> More than 6 mg L <sup>-1</sup> (ideal, Class 1)	0%
	<sup>a</sup> More than 5 mg L <sup>-1</sup> (ideal, Class 2)	17%
	<sup>a</sup> More than 4 mg L <sup>-1</sup> (ideal, Class 3)	43%
	<sup>a</sup> More than 2 mg L <sup>-1</sup> (ideal, Class 4)	79%
	<sup>b</sup> Anoxia 0 mg L <sup>-1</sup>	0%
	<sup>b</sup> Hypoxia >0 < 2 mg L <sup>-1</sup>	21%
	<sup>b</sup> Biol Stress > 2 < 5 mg L <sup>-1</sup>	60%
	<sup>b</sup> > 5 mgL <sup>-1</sup> (ideal)	17%
Chlorophyll-a	<sup>a</sup> Up to 10 mg m <sup>-3</sup> (ideal, Class 1)	57%
	<sup>a</sup> Up to 30 mg m <sup>-3</sup> (ideal, Class 2)	98%
	<sup>a</sup> Up to 60 mg m <sup>-3</sup> (ideal, Class 3)	100%
	<sup>b</sup> Hypereutrophic > 60 mg m <sup>-3</sup>	0%
	<sup>b</sup> High > 20, < 60 mg m <sup>-3</sup>	12%
	<sup>b</sup> Medium > 5, < 20 mg m <sup>-3</sup>	74%
	<sup>b</sup> Low > 0 and 5 mg m <sup>-3</sup>	14%
TSI	<sup>c</sup> Ultra-oligotrophic ≤ 47	0%
	<sup>c</sup> Oligotrophic 47 ≤ IET ≤ 52	2%
	<sup>c</sup> Mesotrophic 52 ≤ IET ≤ 59	10%
	<sup>c</sup> Eutrophic 59 ≤ IET ≤ 63	19%
	<sup>c</sup> Super-eutrophic 63 ≤ IET ≤ 67	26%
	<sup>c</sup> Hyperthrophic > 67	43%

Table S5. Limits of thermotolerant coliforms and *Enterococcus* sp per type of uses and the unappropriated samples (%), according to national and international classification.

Use types and limits		Samples (%)
Thermotolerant coliforms (CONAMA resolutions)		
Class 1	Recreation of primary contact (CONAMA resolution 274/2000)*	90.5% (Unappropriated)
	For the other uses, a limit of 200 MPN 100 mL <sup>-1</sup> (CONAMA resolution 357/2005) **	92.9% (Unappropriated)
Class 2	Recreation of primary contact [(CONAMA resolution 274/2000)*	90.5% (Unappropriated)
	For the other uses, a limit of 1000 MPN 100 mL <sup>-1</sup> (CONAMA resolution 357/2005)**	90.5% (Unappropriated)
Class 3	Recreation of secondary contact, a limit of 2500 MPN 100 mL <sup>-1</sup> (CONAMA resolution 357/2005) **	***
	For the watering of confined animals, a limit of 1000 MPN 100 mL <sup>-1</sup> (CONAMA resolution 357/2005)**	90.5% (Unappropriated)
	For the other uses, a limit of 4000 MPN 100 mL <sup>-1</sup> (CONAMA resolution 357/2005)**	***
<i>Enterococcus</i> sp [47]		Samples (%)
Bathing	Recreation contact, a limit of 33 MPN 100 mL <sup>-1</sup>	93.0% (Unappropriated)

\*More than 80% of the samples with a maximal number of fecal coliforms per 100 mL: 250 (Excellent), 500 (Very Good), 1000 (Satisfactory) Unappropriated: More than 20% of the samples with a maximal number of 1000 fecal coliforms per 100 mL

\*\*Should not be exceeded in 80% or more, from at least 6 samples collected during the period of one year

\*\*\*Our values reached > 1100 MNP 100 mL<sup>-1</sup>

Table S6. Number of inhabitants, growth rate, effluents and thermotolerant coliform levels within the Cereja River PPA.

Neighborhoods	N° of inhabitants		Growth rate (%)	Effluents (m <sup>3</sup> day <sup>-1</sup> )		Thermotolerant coliforms NMP 100 mL <sup>-1</sup> (x10 <sup>4</sup> )			
	2012	2019		2012-2019	2012	2019	2012		2019
