

## Artificial Intelligence in Fault Diagnosis and Signal Processing

Guest Editors:

**Prof. Dr. Roque A. Osornio-Rios**

HSPdigital CA-Mecatronica  
Engineering Faculty,  
Autonomous University of  
Queretaro, San Juan del Rio  
76806, Mexico

**Dr. Athanasios Karlis**

Department of Electrical and  
Computer Engineering  
Democritus University of Thrace,  
67100 Komotini, Greece

**Dr. Andres Bustillo Iglesias**

Department of Informatic and  
Machine Learning, Universidad  
de Burgos, 09006 Burgos, Spain

Deadline for manuscript  
submissions:

**30 June 2024**

### Message from the Guest Editors

The detection and diagnosis of faults is essential in industrial processes, as the early detection of faults avoids damage that may be irreparable to machinery, which would reduce the performance of the control system and reduce the process efficiency, which would result in a decrease in production. Additionally, in terms of industrial safety, this would facilitate safer operations, reducing the risk to plant workers. Therefore, the early detection and correct diagnosis of faults will facilitate decision making that allows corrective actions to be taken to repair damaged components. In recent years, various machine fault detection techniques have emerged; additionally, artificial intelligence and signal processing are essential to achieving this goal. However, the topic continues to generate new trends in methodologies related to multiple fault detection, novelty detection, data mining, development in hardware, etc.

The goal of this issue is to bring researchers and industrial practitioners together to share their research findings and present ideas that are relevant in the field of fault diagnosis using artificial intelligence and signal processing.

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Giulio Nicola Cerullo**

Politecnico di Milano, Piazza L.  
da Vinci 32, 20133 Milano, Italy

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
