Department of Nursing, National  
& Kapodistrian University of  
Athens, School of Health  
Sciences, Athens, Greece

Deadline for manuscript  
submissions:

**31 July 2024**

### Message from the Guest Editors

Occupational hazards—physical, biological, chemical, psychosocial, and ergonomic—exist in every workplace in various combinations. Work practices change over time and new hazards may appear, but old ones still exist and some of them may become even more dangerous causing work-related diseases and injuries. Risk assessment for reducing or eliminating workplace or job-related hazards is a vital process that should consider not only existing legislation and related policies but also the worker's view. Employee and employer risk perception and knowledge, as well as an observance of proposed solutions aimed at improvements for both the workers' health and the work environment, is of paramount importance.

The aim of the Special Issue is to invite submissions—original articles, reviews, and meta-analyses—that have assessed the impact of occupational hazards on the health of the workforce and/or evaluated interventions, including change in policies, that could improve the workforce health as well as have a positive impact on the work environment.
