Deadline for manuscript
submissions:

31 May 2024

Message from the Guest Editors

Dear Colleagues,

Since ores must be physically or chemically processed before being converted into usable metals or finished mineral products, particle properties such as size and shape are critical for liberating and separating valuable minerals from their gangues, improving their separation efficiency, and employing them in the modeling and simulation of comminution unit operations. Since comminuted particles have non-spherical particles, they behave differently from the homogeneous spherical particles that are traditionally used as models. Therefore, not only their size and distribution but also their shape become crucial in mineral processing applications. Characterizing particle shapes helps to determine the connection between process efficiency and product quality and offers opportunities to increase production efficiency.

Thus, this Special Issue welcomes the shape characterization of particles in mineral processing operations (screening and classification, ore sorting, gravity separation, magnetic separation, electrostatic separation, leaching, and flotation) by using new techniques and approaches.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
