Message from the Guest Editors

Our knowledge of the Earth's deep mantle is mostly based on experimental and theoretical studies as we cannot sample the deep mantle directly, and rocks from such depths are rare and usually experience retrogression at different pressure–temperature conditions, losing most of the original signatures. To avoid this, we rely on minerals that act as robust containers and show the potential for bringing deep mantle signatures in minerals and inclusions to the Earth's surface. Diamonds, chromites, and garnets are such potential mineral-container phases. In this Special Issue of *Minerals*, we invite contributions related to UHP minerals as messengers of the deep mantle from the Mantle Transition Zone and below. Papers can be submitted at any time until the deadline as they will be published on an ongoing basis.

Deadline for manuscript
submissions:

14 June 2024

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
